1 History of Health Care System

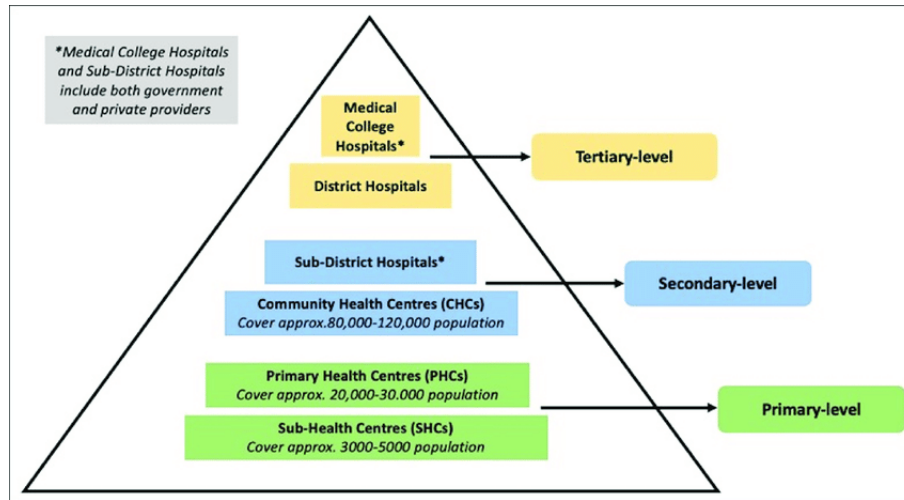

Around 150 year ago when any disease come and rune whole area, people start thinking to how to control this. At that time the growth of scientific knowledge about sources and means of controlling disease and the growth of public acceptance of disease control as both a possibility and a public responsibility make very important role for initialising the health care system.

Healthcare is evolved from a simple system of home remedies that people practices from generations.

2 Health Care System in initial 20th Centuries

Late 19's or 20's witnessed many true revolution in health care. Research into the causes of infectious diseases and the development of vaccines and pharmaceuticals quelled very infectious illnesses such as polio and smallpox. In that period Government takes many big steps to stop that kind of infectious disease. Due to which India get polio free country certificate in 2014. Government and public both understood their responsibilities. It prove that our Health care system get improved very much.

In India Health Care system is distributed like :-

3 Today's Health Care System

With time health care system become more better, In this time everyone realises that how much health care system is important. In this time we understand the importance of health care workers, Doctors and nurses, only in that time we actually realise that this is the most important things in all. all this because to covid 19. As we know education is directly proportional to better health care system, This perfectly fit in this time. Many things are still there to improve, but from previous time it is more better today.

4 Upcoming Innovations in Health Care System

For betterment of Health care system and for convenient and efficient medical devices, many innovation are happening such as VR in health care, Drons for delivering medical supplies, camera pill, pocket size ultrasound machine and still counting. Many countries increases their fund for health care sector, which implies more innovations and improvement.

Innovation in the health care system is one of the way to improve efficiency of human life.
